

DISTINGUISHED SCIENTIST LECTURE

DIMMING THE SUN:

HOW CLOUDS AND AIR POLLUTION AFFECT GLOBAL CLIMATE

BEATE LIEPERT

SENIOR RESEARCH SCIENTIST - CLIMATE & SOLAR ENERGY
NORTHWEST RESEARCH ASSOCIATES

While anthropogenic greenhouse gas emissions are well known to cause the observed global warming in the last century, the climate impact of short-lived air pollution is not well understood. The potentials of these pollutants to modify climate or even mask global warming will be introduced and the wider consequences of dimming (e.g. geo-engineering) will be discussed.

WEDNESDAY, MARCH 25

BERTELSMANN CAMPUS CENTER - WEIS CINEMA

7PM
