

✧ BARDE3'S COMPOST ✧

What is Compost? How does it work?
Compost is turning food waste and other organic matter into rich fertilizer that can be reused.
It works when the microorganisms begin to decompose waste and in the right conditions it turns the waste into a natural fertilizer that enriches the soil.

Why Should I Compost?

- Compost limits your carbon footprint.
- Normal food waste that goes to landfill rots and in turn releases methane (a greenhouse gas that is 72 times as powerful as carbon dioxide). Boo!

How do I compost at home?

1. Any time you are at home eating notice the scraps/waste you are producing.
2. Ask yourself .. "Is it green matter or brown matter?" as seen in the image to the right →
3. Make sure there is NO dairy or utensils in the scraps you are about to compost.

4. Put scraps in sealable container and keep in freezer.

5. When this bag gets full take it to one of the outdoor compost bins near your residence hall and discard it there. BardE3's waste team will take care of it after that!! Help us, Help the Earth :-)

Dorm Composting :

From res. hall kitchen

To compost collector

Empty coffee bag or old water jug kept in freezer

To local outdoor bin

Don't know what to hold your compost in? Contact our office - we have plenty of options!

Located next to or behind res. hall

What items can go in res. hall compost?

Veggies and Carbs

Meats, Dairy, Eggs

Because dorms compost in smaller containers they cannot properly 'digest' meats, dairy, and eggs.

Try to collect things like:
 -clean bread crumbs
 -strawberry tops
 -skins/shavings from cooking
 -end of the chip bag
 -Fruit cores
